Lamp Sensing Switch

Your Problem:

Lamp maintenance can be costly and time consuming.

Illustrated here is a typical lamp replacement scenario. The Indy Performance Series Lamp Sensing Switch eliminates these problems.

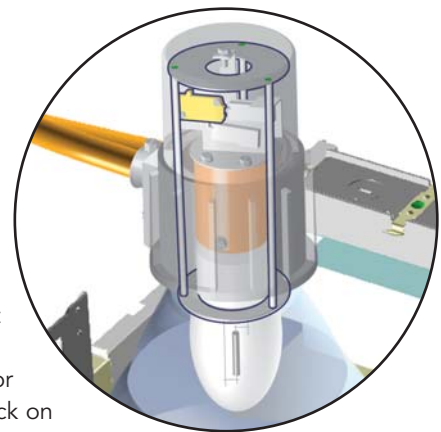

Our Solution:

Because electronic ballasts have sensing circuits to detect the end of lamp life, a ballast connected to an inoperative lamp will likely be in a "shut down" mode. When the lamp is replaced, the power to the ballast must be cycled off and back on for the ballast to re-start the lamp. However, when the power is cycled off and back on via a circuit breaker or switch, other fixtures on the same circuit will extinguish and not come back on until the lamps cool. Lamp maintenance can be simplified by using Indy's patent pending Lamp Sensing Switch option. When the lamp is removed, the switch automatically cuts the power between the ballast and the primary. When a new lamp is installed, power is automatically restored to the ballast.

How To Order, simply add the "-SW" suffix to the rough-in catalog number as shown in the Indy CMH catalog and on the spec sheets.

See back for ordering details.

*Consult factory, for product availability.

JUNO LIGHTING GROUP
by Schneider Electric

The items below represent the Indy Performance Series rough-in with the lamp sensing switch installed. Each must be ordered with an appropriate reflector, bar hanger and other accessories as desired.

4" PAR20 VERTICAL CMH DOWNLIGHT
