INDY™ BRAND ROUNDS OUT CMH PRODUCT LINE WITH WITH NEW T4 AND T6 WALLWASH LUMINAIRES

Indy Performance Series Continues to Provide Industry's Most Comprehensive CMH Offering

DES PLAINES, III. (November 19, 2009) — When it comes to commercial lighting, the Juno Lighting Group® Indy™ Performance Series offers quality, versatility and selection – from downlights to wall washers to adjustables, cylinders and multi-lamp fixtures. Already offering the most comprehensive line of Ceramic Metal Halide (CMH) products in the industry, Indy is continuing to expand this offering with the introduction of the new T4 and T6 Wall Wash luminaires.

These new products complement the entire Indy fixture family, which is available with a full range of ceramic metal halide lamps and efficient electronic ballasts, helping designers to comply with more stringent energy codes and to achieve LEED certification requirements. The existing Indy CMH fixtures equipped with T-Series lamps feature proprietary “interchangeable” locked optics, providing optional reflectors that can be quickly and easily exchanged, permitting lighting beam spreads to be reconfigured as required. The result is the best of both worlds: locked optics, with the flexibility to adapt to changing environments.

“At Juno Lighting Group, we pride ourselves on having everything architects, designers and specifiers could possibly require for their commercial lighting projects and our new T4 and T6 wall wash fixtures help us do just that. With this complete product line, customers can be assured of a total solution that will exceed requirements for lighting performance, aesthetics, energy efficiency, ease of installation and low maintenance,” said Jeff Spencer, director of product management - commercial.

T4 and T6 Wall Wash Luminaires

The new Indy Ceramic Metal Halide Wall Wash luminaires provide a clean architectural look and are designed for commercial applications ranging from retail stores to health care facilities, offices and educational, government and hospitality industry settings. The fixtures are available with uniform glass or clear lenses, allowing them to be used for wall wash or accent light applications.

The wall wash units are available with T4 or T6 lamps. Both offer a premium, high efficiency, constant power electronic ballast that provides optimum color and CRI uniformity from fixture to fixture. They offer consistent lumen output and photometric performance for the life of the lamp. Units are available in a black or white finish. Housings are of 22-gauge die-formed galvanized steel with painted trim that attaches to the housing using two torsion springs and an electrical quick-connector. The lamps may be replaced without removing the trim section.

Energy efficient lighting solutions

Indy Series CMH luminaires provide a high performance, cost-effective lighting solution with the most energy efficient sources available. They require less than half the watts to produce the same light output as halogen. Most of the Indy CMH fixture styles are designed to accommodate the compact, ultra-efficient T4 and T6 lamps. These high performance lamps can cover a broad range of commercial lighting applications with just one or two wattage ratings. With fewer lamps to stock, maintenance is quicker and easier, and relamping errors become a thing of the past.

About Juno Lighting Group®

Founded in 1976, Juno Lighting Inc. is a leader in offering high-quality and innovative commercial and residential lighting solutions. Under the Juno Lighting Group umbrella, the company comprises eight product brands: Juno®, Indy™, Alfa™, AccuLite™, Aculux™, NaviLite® and DanaLite. The product brands provide lighting fixtures that are attractive, well-engineered and easy to install.
